

Information about the lecture

Speaker Prof. Alexander Rudolphi

Title More than green – The DGNB System for sustainable buildings and

districts

Group of topics 21.06.2017

Sustainable Building - Energy - Ecosystemservices Concept

Language German

Content The DGNB System covers all of the key aspects of sustainable

building: environmental, economic, sociocultural and functional aspects, technology, processes and site. The assessments are always based on the entire life cycle of a building. Of course the focus is always also on the wellbeing of the user. It is crucial that the DGNB does not assess individual measures but instead the overall

performance of a building or district.

The presentation explains the impact of Green Infrastructures on the

sustainability of projects and show how this can be assessed

holistically with the DGNB system.
